INFORMATION ABOUT PLANT ORIGIN

Botanical Description

The Globe artichoke is a perennial plant up to 2 m. The entire leaf may be up to 70 cm long and 30 cm wide. The lamina is deeply lobed in the upper part and in the lower part the leaf becomes pinnate. All the segments have markedly dentate margins and taper at the apex. Spines are absent. The upper surface of the lamina is green with a fine covering of whitish hairs, the lower surface is pale green or white with long, tangled hairs. The petiole and main veins are flat on the upper surface, prominently raised and longitudinally ridged on the lower surface, with conspicuous hairs on both surfaces. (1)

**PHARMACOLOGICAL STUDIES**

- **Blood lipid and cholesterol lowering effects:** In different *in vitro* and *in vivo* experiments, artichoke leaf dry extracts lowered increases in serum and liver cholesterol and prevented the formation of atherosclerotic plaques. In many clinical studies artichoke leaf dry extracts proved significant lipid-, triglyceride- and phospholipid-lowering effects.\(^2\,^4\)

- **Antidyspeptic and gastrointestinal effects:** In different clinical trials in patients with functional dyspepsia, artichoke leaf dry extract was found to improve the overall symptom with higher improvement in the global quality-of-life scores than with placebo. Digestive complaints declined in a clinically relevant statistically significant manner within 6 weeks. \(^2\,^4\)
